

Problem Statement

Analyze loan portfolio performance and lending operations.

Track Good vs Bad Loans and repayment behavior.

Monitor KPIs like funded amount, repayments, interest rate, and DTI.

Build an interactive Power BI dashboard for portfolio insights.

Dashboard 1: Summary

In order to monitor and assess our bank's lending activities and performance, we need to create a comprehensive Bank Loan Report. This report aims to provide insights into key loan-related metrics and their changes over time. The report will help us make data-driven decisions, track our loan portfolio's health, and identify trends that can inform our lending strategies.

KPI

Total Loan Applications:

- We need to calculate the total number of loan applications received during a specified period.

Total Funded Amount:

Understanding the total amount of funds disbursed as loans is crucial.

Total Amount Received:

Tracking the total amount received from borrowers is essential for assessing the bank's cash flow and loan repayment.

Average Interest Rate:

Calculating the average interest rate across all loans.

Average Debt-to-Income Ratio (DTI):

Evaluating the average DTI for our borrowers helps us gauge their financial health.

Dashboard 2: Overview

In our Bank Loan Report project, we aim to visually represent critical loan-related metrics and trends using a variety of chart types. These charts will provide a clear and insightful view of our lending operations, facilitating data-driven decision-making and enabling us to gain valuable insights into various loan parameters. Below are the specific chart requirements:
